PROFESSIONAL SUMMARY

Full-stack Software Engineer with 3+ years designing, building, and shipping production-grade web applications end-to-end, from concept through deployment. Delivered 6+ applications, shrinking release cycles by 60% and lifting rendering performance by 45% within Agile/Scrum teams. Works daily across ReactJS, Next.js, TypeScript, Node.js, Express.js, MongoDB, and PostgreSQL, building and integrating REST APIs, with the MERN ecosystem as a core strength, plus working knowledge of Python, and C++/C#. Collaborates with cross-functional teams through code review, technical documentation, and test automation, translating complex requirements into scalable, secure solutions. Currently expanding into Golang and Rust.

WORK EXPERIENCE

Software Engineer | Vaultize Technologies | Product-Based Company

April 2024 – Present

- Engineered 15+ reusable ReactJS components for an enterprise file-sharing platform, cutting feature delivery time by 30% and maintaining consistent UX across 5+ client deployments.
- Designed and executed 200+ test cases using Jest and Playwright for unit and integration testing, reducing production bugs by 40% while keeping test documentation current for cross-team transparency.
- Led the migration from client-side to server-side rendering with Next.js, improving page load speed by 45%, lifting SEO ranking by 3 positions, and boosting user retention by 15%.
- Optimized real-time document review features to sustain 100,000+ requests/hour and 100+ concurrent users with zero production downtime.
- Implemented access controls and audit trails to reinforce security across the codebase; separately, rolled out UI enhancements that drove a 20% increase in user engagement within 60 days of release.
- Reviewed 50+ pull requests per month and defined front-end coding standards adopted across a 6-person team, collaborating with backend engineers on 10+ REST API integrations.
- Automated CI/CD pipelines with GitHub Actions, cutting deployment time by 60%; maintained Docker environments and contributed to biweekly Agile sprint planning and retrospectives.

Full Stack Development Apprentice | Geekster | Intensive Training Programme

June 2023 – February 2024

- Developed and deployed 8+ full-stack MERN applications covering REST API design, relational database modeling, and responsive UI development, building fundamentals in web architecture and client-server communication.
- Secured first place in a competitive hackathon by architecting and shipping a polished OTT streaming platform with a seamless user experience, demonstrating the ability to deliver production-quality work under time pressure.
- Solved 250+ Data Structures & Algorithms problems in Java and C++, applying optimization patterns to front-end performance and component architecture decisions.
- Competed in weekly LeetCode and Codeforces contests, reinforcing algorithm design and optimization skills later applied to performance-critical front-end decisions at Vaultize.

PROJECTS

TalentGraph · Next.js · TypeScript · OpenAI API · Supabase · Zustand · Tailwind CSS

talentgraph.netlify.app

- Built and launched an AI-powered resume builder with JD-tailored suggestions and custom PDF export, delivered in under 6 weeks with a full CI/CD pipeline and a 20-component library.
- Integrated the OpenAI API for content generation and Supabase for authentication, reducing average resume creation time by 70% versus manual drafting.

Finance Management System · Next.js · TypeScript · Prisma · Inngest · Supabase

finance-buddy-murex.vercel.app

- Architected a full-stack expense tracker with AI-powered summaries, automated receipt scanning, real-time charts, and scheduled alerts, handling 500+ transactions with sub-200ms query response times.
- Configured secure authentication and optimized Prisma/PostgreSQL queries, achieving 3x faster data retrieval; deployed via an automated GitHub Actions CI/CD pipeline.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, Python, C++, C# (expanding into Golang & Rust)

Frontend: ReactJS, Next.js, Redux, Zustand, HTML5, CSS3, Tailwind CSS, Responsive Design

Backend & Databases: Node.js, Express.js, REST API Design & Integration, PostgreSQL, MongoDB, SQL, Supabase, Prisma ORM

Testing & DevOps: Jest, Playwright, Unit & Integration Testing, GitHub Actions, Docker, CI/CD, Vercel, Firebase, Linux, Bash Scripting

Tools & Practices: Git, Agile/Scrum, Postman, Code Review, Technical Documentation, GitHub Copilot, Claude AI, Figma

EDUCATION

Master of Computer Applications (MCA) · Graphic Era University, Dehradun, India

Bachelor of Computer Applications (BCA) · Shri Guru Ram Rai University, Dehradun, India
